Restriction/election

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 40-46, drawn to a method or an apparatus for reducing the bit rate of a video bitstream to meet bandwidth constraints, classified in class 382, subclass 239.
- II. Claims 8-39 drawn to a method, or a system or computer readable medium, for filtering transform coefficients, classified in class 382, subclass 235 and 260.

Inventions are related as combination/subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination I as claimed does not require the particulars of the subcombination as claimed because I does not require particular selecting transform coefficients and generating less bandwidth coefficients. The subcombination has separate utility such as filtering transform coefficients.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
